# Selectronic

Trusted • Caring • Intelligent

## OVERVIEW

Advanced features to provide a comfortable showering experience for everyone.

- Precision thermostatic technology maintains safe and constant water temperatures within +/- 0.5°C, even when water pressures change.
- Smart data logger technology tracks showering times and temperatures to monitor energy and water usage.
- A rated for energy efficiency, Selectronic Premier is highly affordable to run.
- Suitable for use in gravity systems with low water pressure – from 0.3 bar.
- Multiple heating elements for best in class lime scale tolerance.
- Integrated Eco Water Save (Max 6l/min) and Power Save functions automatically adjust flow rates to reduce water and energy use.
- A unique user operated fault-finder allows problems to be diagnosed and solved swiftly.
- Installation is swift and simple, with speedy one-button commissioning.
- Set a safe maximum water temperature (40 to 43°C) with the Temperature Lock function.
- Compatible with drain pumps in level access bathrooms.
- Large one-touch tactile buttons, a large LED display screen and innovative audio feedback allow for easy shower and temperature control.
- 30 minute auto switch off for peace of mind.

The Selectronic Premier range offers options to suit different user needs:

- longer riser rails and hoses available for comfortable seated showering
- remote control for shower operation from outside enclosures and screens.

## KEY FEATURES

## CASE STUDY AND ENDORSEMENTS

The Selectronic Premier Plus shower was specified by Erimus Housing for its £8m Gateway project in Middlesbrough. The facility provides specialist 'step down' rehabilitation and care services and support for people with traumatic brain and spinal injuries, strokes, long-term neurological conditions and complex care needs.

The Gateway Project is the first of its kind in the UK and includes a residential rehabilitation and care centre, a specialist community wellbeing hub and a range of transitional housing options provided by Erimus Housing. The aim of the scheme is to enable quicker hospital discharges and reduce long-term care costs by helping people live more independent lifestyles.

Selectronic Premier Plus showers were installed in the bathrooms of the housing, which provides move on accommodation to clients who are unable to return to their normal home due to its unsuitability or whilst they are awaiting comprehensive adaptation work to be completed. The Selectronic Premier Plus shower was perfect for the project, due to the safety and independence it offered to users.

*"The transitional housing facility is a vital step in what is often a lengthy care plan for people. People will spend 12 to 16 weeks in transitional housing, therefore all elements of this project have had to be carefully considered to ensure they provide the high level of care required whilst also giving it a homely feel."*

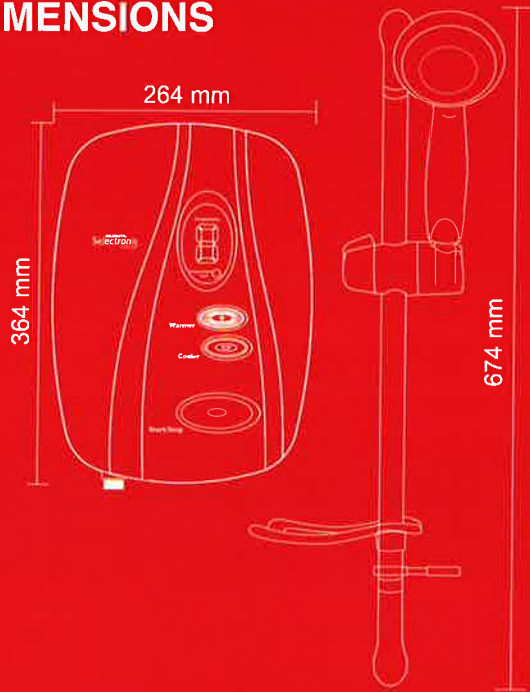

*"The Redring Selectronic Premier Plus shower offers a range of useful and easy to operate features whilst being endorsed by various independent organisations such as the RNIB and BEAB Care which reinforces its safety credentials and gives absolute peace of mind."*
